

INVESTING IN CANADA'S URANIUM FUTURE

Backed by Industry Leaders
Built for Large-Scale Exploration

TSXV: PTU | OTCQB: PTUUF
Q2 - 2025

Disclaimer

The general information set out in this presentation regarding the uranium market, including but not limited to, the demand and supply of uranium, historical events that affected uranium pricing, the global state of the uranium market and other related information, is provided solely for readers' general knowledge and is provided "as is". Purepoint does not warrant or make any representations concerning the accuracy, likely results or reliability of the use of such information. The information provided herein is not intended to be a comprehensive review of all matters and developments concerning the uranium market, and Purepoint assumes no responsibility as to its completeness or accuracy. Furthermore, the information set forth herein in no way shall be construed or interpreted as, or as part of, an offering or solicitation of securities. No securities commission or other regulatory authority in Canada or any other country or jurisdiction has in any way passed upon this information and no representation or warranty is made by Purepoint to that effect.

Caution about Forward-Looking Information

This presentation contains certain forward-looking information and statements, within the meaning of applicable securities legislation, which are based on the opinions and estimates of management and are subject to a variety of risks and uncertainties and other factors that could cause actual events or results to differ materially from those projected in the forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "budget", "plan", "continue", "estimate", "expect", "forecast", "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar words suggesting future outcomes or statements regarding an outlook.

The forward-looking statements regarding the current internal projections, expectations and beliefs of Purepoint as of March 2025 about the future uranium pricing and its potential effect on the uranium equity market based on our uranium price sensitivity analysis and investment thesis. These statements are based on a number of material assumptions including but not limited to, the continuing decline of future global uranium supply, the continuing steadiness of future global uranium demand, the pricing inelasticity with respect to the uranium spot price in relation to the demand and consumption of uranium, future trend of uranium spot price and future patterns of long-term contract negotiations. These material assumptions may prove to be incorrect, and the actual results and events may be significantly different from what we currently expect. The forward-looking information set forth herein is designed to help you understand the management's current views of our near and longer-term prospective with respect to the uranium market in general, and it may not be appropriate for other purposes. We will not necessarily update this information unless we are required to by applicable securities law.

Limitation of Liability

Purepoint is not liable for any direct, indirect, special, incidental or consequential damages arising out of the use of – or the inability to sue – the information set forth in this presentation, whether based on breach of contract, breach of warranty, tort (including negligence) or otherwise. This includes but is not limited to the loss of profit, litigation or due to business interruption, even if Purepoint or any of its authorized representatives was advised of the possibility of such damages. The negation of damages set forth above are fundamental elements of the basis of the agreement between Purepoint and the readers of this presentation. This presentation would not be provided without such limitations.

Qualified Person

Scott Frostad BSc, MASc, PGeo, Purepoint's Vice President, Exploration, is the Qualified Person responsible for technical content of this presentation.

Backed by Industry Leaders, Built for Large-Scale Exploration

Trusted Operator & Chosen Partner of Top Industry Players

District-Scale Projects in the Most Prolific Areas

- *Six* projects under active joint venture are strategically positioned along well-established mine corridors on trend with major discoveries

Financial Support and Validation from JV Partners

- Executing the original generator model – strategically, consistently and with discipline
 - Tier-One Projects with Tier-One Partners
 - Operator-Led by Design
 - Multiple Partner-Funded Exploration Programs
 - Scalable and Repeatable Model
 - Management fees funding G&A

What Most Call “Generation” Isn’t.

Generator Model Criteria

1. Secures high-quality, **tier-one assets**
 - Not just acreage but strategically located ground with real geological potential.
2. Attracts **top-tier**, well-funded **partners**
 - Not peer-to-peer options, but majors with capital and credibility.
3. Retains control as **technical operator**
 - Steering exploration, not watching from the sidelines.
4. Commits partners to **multi-year funding**
 - Not shallow programs—real capital committed over time.
5. Advances projects through **drilling**
 - Activity rooted in discovery, not flipping or repositioning.
6. **Limits dilution** through capital discipline
 - Partner money at work—not endless raises.
7. **Monetizes with flexibility** and foresight
 - Sale, retained interest, or royalty—not dependency on production.

Defined

Long-Term Strength

- *The Structural Supply Deficit is Growing*
 - ✓ Global mine production < reactor demand for the 6th consecutive year
 - ✓ Kazakhstan's Inkai mine suspension & geopolitical risks limit new supply
- *Long-Term Prices Show the Real Story*
 - ✓ 3-Year Forward Price: **\$88/lb**
 - ✓ 5-Year Forward Price: **\$95/lb**
 - ✓ Utilities locking in long-term contracts at ~\$80/lb
- *Nuclear Demand is Accelerating*
 - ✓ 30+ countries committed to tripling nuclear capacity by 2050
 - ✓ AI & data center energy needs increasing demand for baseload power
 - ✓ Nuclear = key to global decarbonization & energy security

Operator: Purepoint

SMART LAKE JV

- Cameco Corp: 73% | Purepoint: 27%

DORADO JV

- IsoEnergy: 50% | Purepoint: 50%

CELESTE BLOCK JV

- IsoEnergy: 50% | Purepoint: 50%

AURORA JV

- IsoEnergy: 50% | Purepoint: 50%

JV with Cameco Corp.

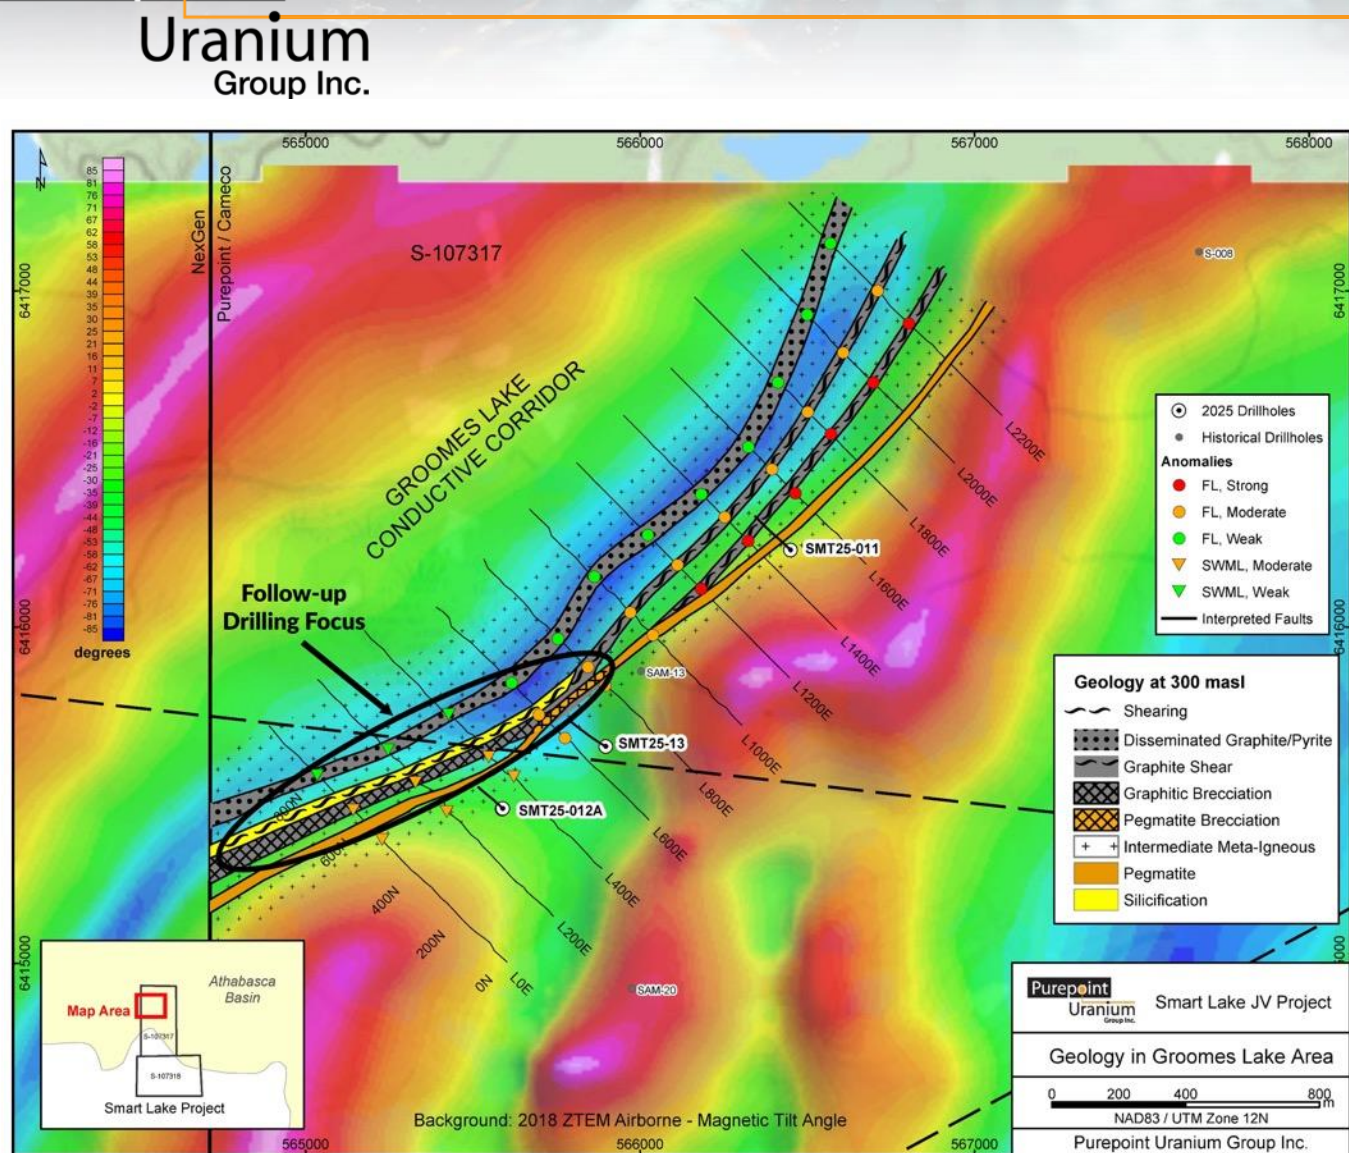

SMART LAKE DESCRIPTION

- 9,860 hectares ~18 km west-northwest of Hook Lake JV and ~60km south-southwest of Orano's former Cluff Lake Mine
- Joint Venture Breakdown
 - Cameco Corp: 73% | Purepoint: 27%

- Geologically connected to the Shea Creek Deposit
- The Smart Lake targets represent the southern end of the Saskatoon Lake Conductor: displaced along the Beaty River Fault
- Early drilling by the JV partners, intersected basement-hosted uranium mineralization associated with a hydrothermally altered, graphitic shear zone that included 15.4 metres of 147 ppm U only 200 metres from surface
- Comparable to the Patterson Uranium District, key geological processes required for the development of high-grade uranium deposits are considered to be clearly present at Smart Lake

Drilling Begins March 2025

Groomes Lake Target Area

- Conductors within the Groomes Lake Target strikes north-east which may be favorable for enhance dilation, fluid flow and uranium deposition

SMML and FL TEM Survey – completed December 2024:

- The survey covered 31.5 line-kilometres across 19 loops using 12 lines spaced 600 metres apart
- Three discrete parallel EM conductors, approximately 100 metres apart extending over 2.2 kilometers, were outlined, representing highly prospective drill targets

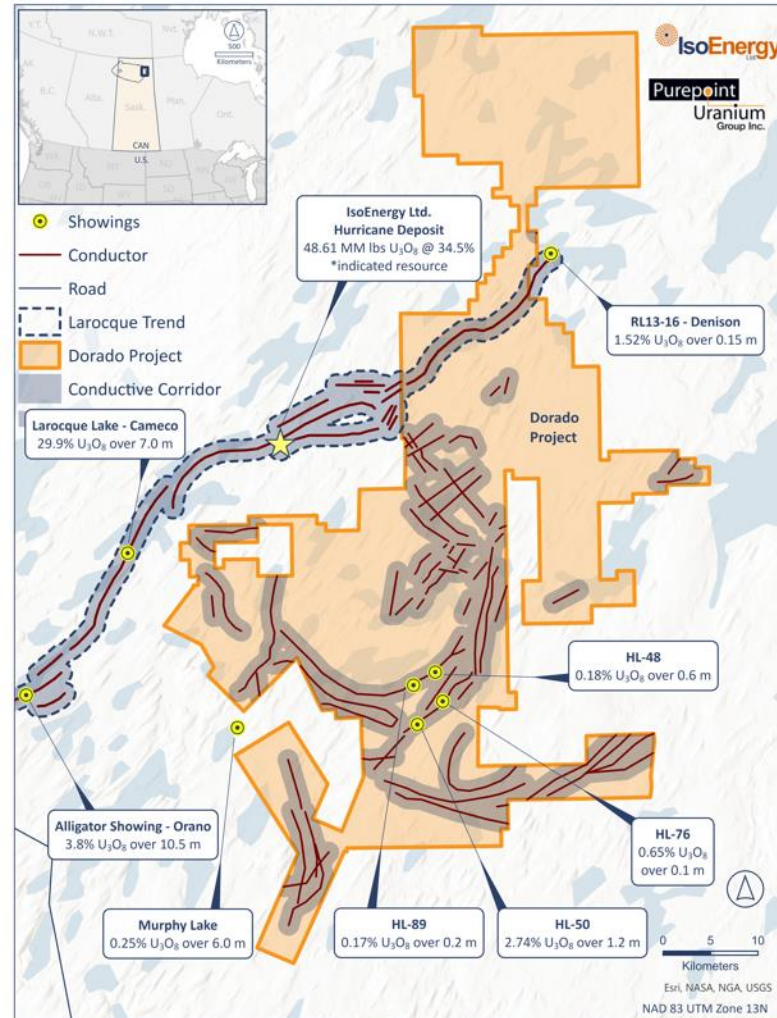

2025 Drill Program

- 1,264m drilling completed in 3 holes
- All three drill holes intersected graphitic shear zones and complex structural features
- The central EM conductor hosts the strongest structural deformation, possibly representing a critical fluid pathway for uranium mobilization and precipitation
- The top priority Groomes Lake exploration target is the Central EM conductor where it intersects the unconformity

DORADO JV DESCRIPTION

- 38,810 hectares positioned along the renowned Larocque conductive corridor (the “Larocque Trend”), home to the Hurricane Deposit
- Joint Venture Breakdown
 - IsoEnergy: 50% | Purepoint: 50%

- Drilling has revealed a shallow vertical depth to the unconformity, ranging from just 27 to 133 metres and several highly prospective yet untested zones remain
- Historical drilling intersected high-grade basement-hosted uranium mineralization, including 2.74% U_3O_8 over 1.2 metres in drill hole HL-50 along the H11 South conductor
- Characterized by ~140 km of graphitic conductors, with significant untested gaps of up to 1,000 metres, presenting exceptional exploration potential

Drilling Begins Spring 2025

Serin Grid

- Extension of the Larocque Conductive Corridor
- Two holes planned for Serin Grid area in 2025

Turaco Grid

- Priority target due to low gravity / low magnetic response
- Four holes planned for Turaco target area in 2025

Q48 Grid

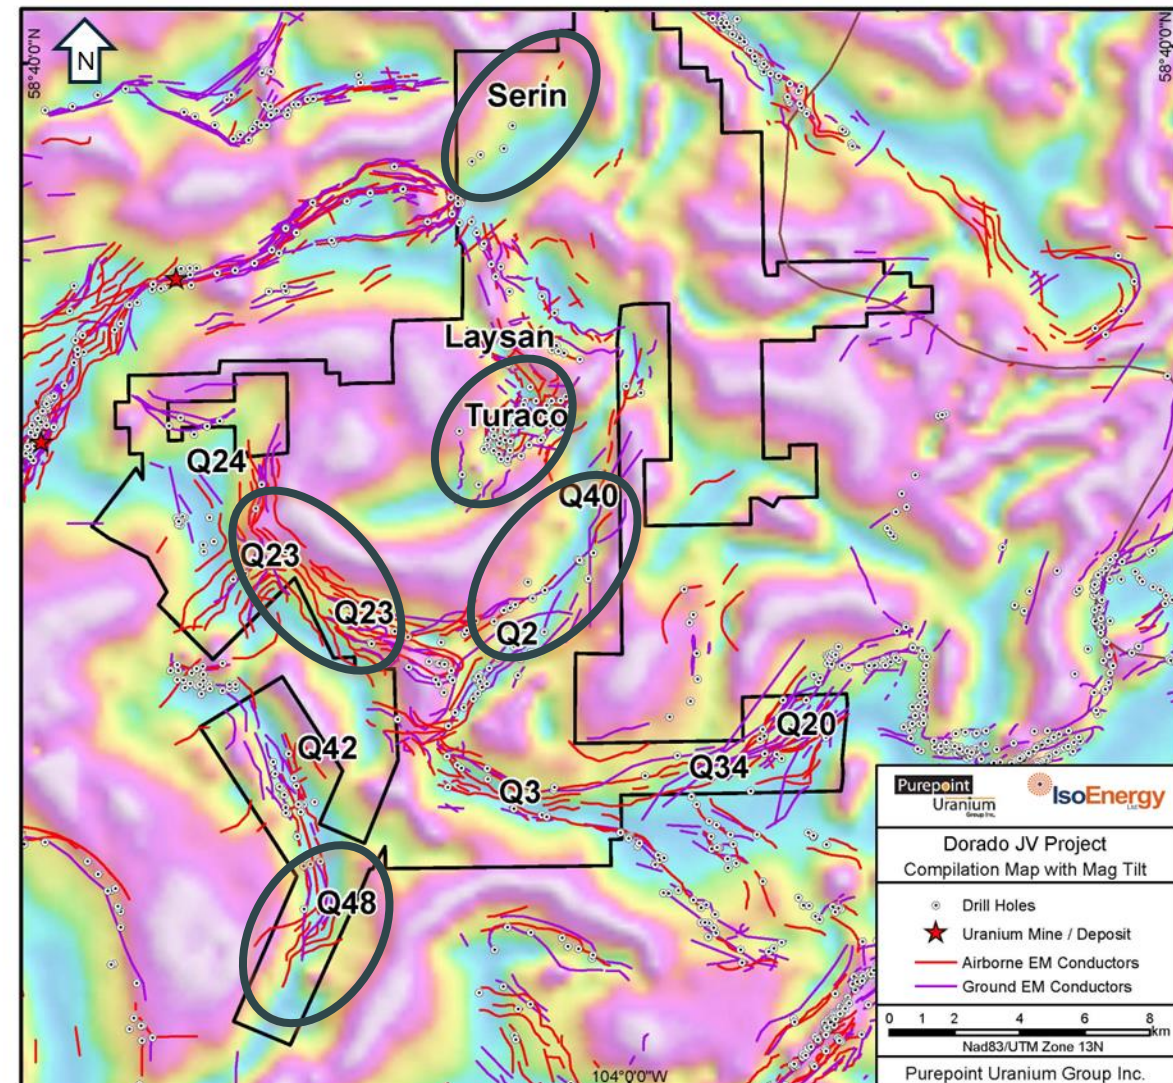

- Two planned 2025 drill holes

Q23 Grid

- Targeting conductive anomalies from the 2023 SWMLTEM survey
- Three planned 2025 drill holes

Q2/Q40 Grids

- Targeting historic, untested airborne geophysical surveys
- Two planned 2025 drill holes

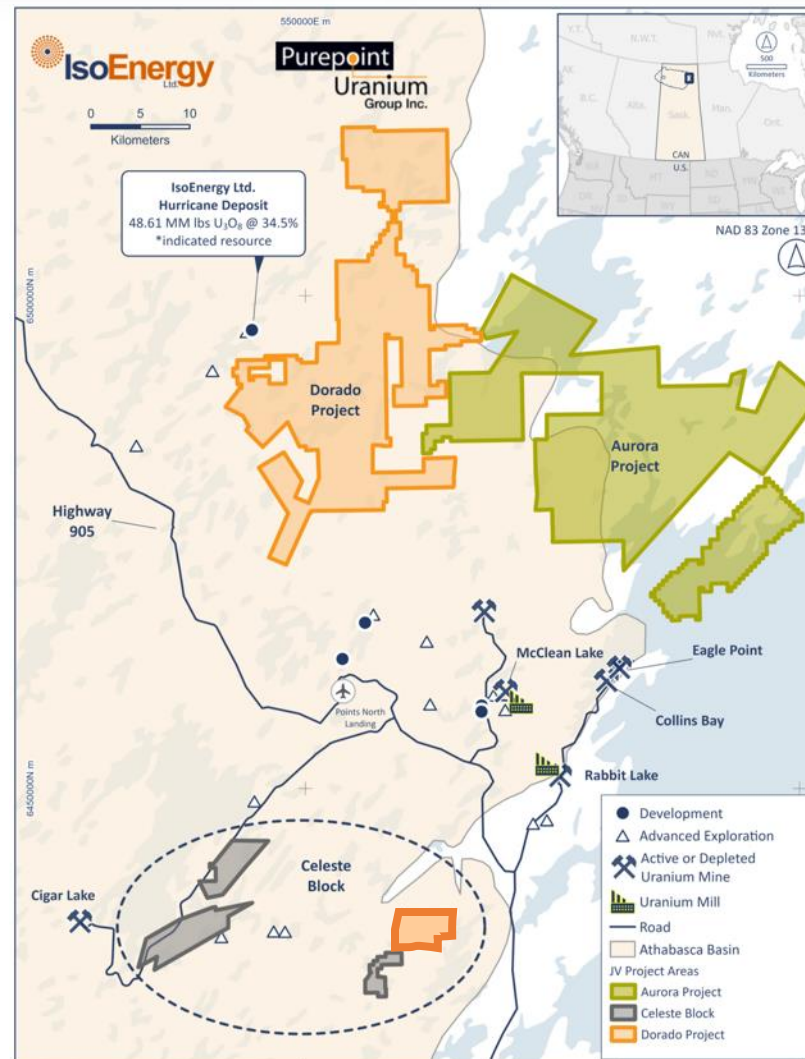

Drilling Scheduled for Fall 2025

CELESTE BLOCK JV DESCRIPTION

- 6,539 hectares with target depth relatively shallow as sandstone thickness ranges between 60 metres to 350 metres at Thorburn in the west
- Joint Venture Breakdown
 - IsoEnergy: 50% | Purepoint: 50%

- Near-term efforts will focus on drill testing recent geophysical results on the NE property where sandstone cover is thin, and limited historical drilling has been completed with just one hole drilled since 1989
- Approximately 800 metres in 4 drill holes are planned for 2025

JV with IsoEnergy Ltd.

AURORA JV DESCRIPTION

- 53,045 hectares positioned directly east of Dorado JV project, situated on the shallow, eastern edge of the Athabasca Basin close to several uranium deposits including Orano's JEB deposit and Cameco's Eagle Point deposit.
- Joint Venture Breakdown
 - IsoEnergy: 50% | Purepoint: 50%

- An airborne magnetotellurics geophysical survey on the SE portion of the project is planned for 2025 to resolve deep-seated structures targeted for drilling

Joint Venture Breakdown

- Cameco: 39.5%
- Orano: 39.5%
- Purepoint: 21.0%
- As the operator, Purepoint earns a 10% management fee

Next Steps

- Proposed Drilling: 4,850 m between Carter Corridor & Patterson East
- Proposed Geophysics in Carter North Corridor

Purepoint's Spitfire Discovery

- Resource not defined
- Results include 10.3% U_3O_8 over 10.0 metres

NexGen's Arrow Deposit

- 2018 PFS
- Indicated Resource
- **256,600,000 lbs U_3O_8**
- Avg Grade **4.03% U_3O_8**

Paladin's Triple R Deposit

- 2022 MRE
- Indicated Resource
- **114,900,000 lbs U_3O_8**
- Avg Grade **1.94% U_3O_8**

Carter Corridor

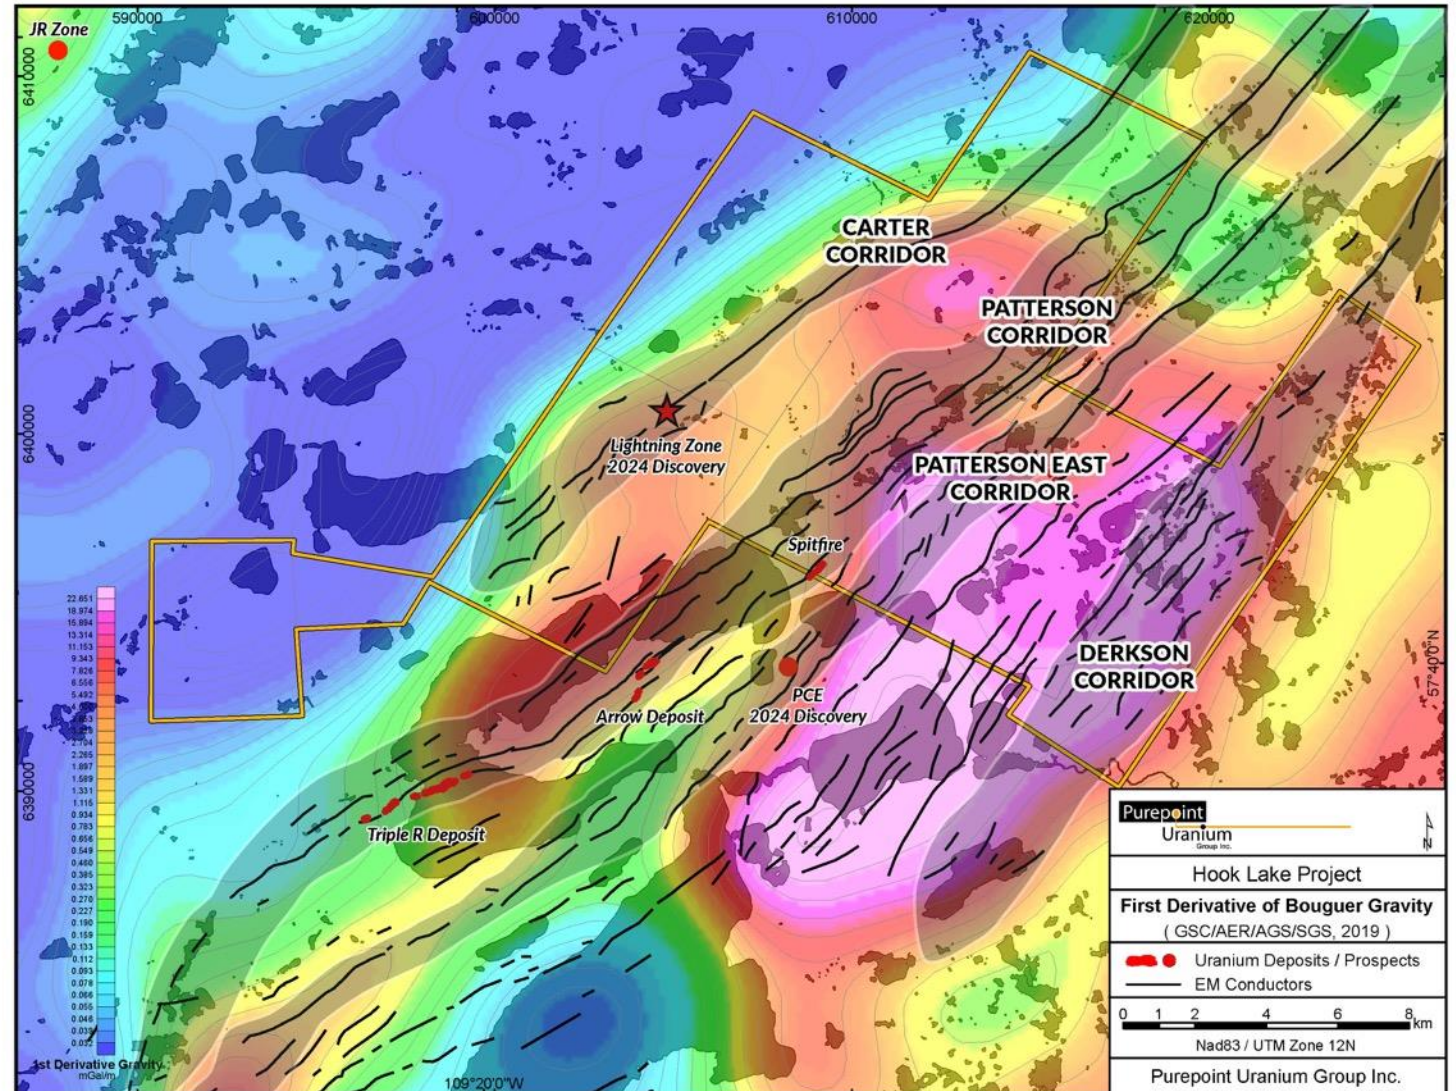

- **25km** band of graphitic conductors
- Ideal Rock Type
- Extremely close to hydrothermal heat source (Clearwater Domain)
- Complex, long-lived faulting pattern

2023/2024 Drilling & Identification of the Lightning Zone

- 8,042m across 10 holes
- 5-800m step outs testing just over 5 km so far
- CRT24-10 intersected a 13 m wide zone of altered brecciation and shearing that returned **0.29% U3O8** over 0.9 metres, including **0.68% U3O8** over 0.3 metre.

Proposed Program at Carter Corridor

- 5 diamond drill holes for a total of 2,750m
- EM survey at the Carter North

On Trend With NexGen's Newest High-Grade Discovery

Patterson East Corridor

- Targeting a **1.2 km** band of graphitic conductors
- Depth to unconformity 100 to 200m

Recent Findings at the Patterson East Corridor

- NexGen PCE Discovery: RK-24-183
- 13.5m of 7.8% U_3O_8 including 0.5m of 10% U_3O_8 and 0.5m of 6.23% U_3O_8
- 43,000 m drill program currently underway by NexGen

Proposed Drill Program

- 6 diamond drill holes for a total of 2,100 m

F O R A N

- Phase 1 Earn In: 51% by spending \$3mm to Nov 2027
- Phase 2 Earn In: 29% by spending \$3mm 2029
- Phase 3 Earn In: 20% by paying PTU \$10mm + 2% NSR

Tabbemor

100% Owned

- Due South of some of the Basin's largest uranium deposits
- Geologically controlled by the Tabbemor Fault System (TFS)

Russell South

100% Owned

- Located at the southern edge of the Athabasca Basin, adjoining Cameco's Key Lake Project, Skyharbour's Moore Lake Project and Rio Tinto's Russell Lake project to the west and south
- 5 drill ready targets identified

Carson Lake

100% Owned

- Adjoins ValOre Metals Hatchet Lake Project in the Northeastern edge of the Basin
- 3 drill ready targets identified
- Permits pending

Henday

100% Owned

- Located 9 km NW of Orano's Midwest Lake Deposit & 10 km W of UEC's Roughrider Deposit
- 10Km due east and along strike is Denison's Huskie Zone (WAT18-52 included 4.5% U3O8 over 6.0 metres)

Tower

100% Owned

- Geologically controlled by the Tabbemor Fault System (TFS)
- TFS not only hosts 80 historic mines and gold occurrences but as well crosscuts the Basin's mine trend aligning itself with 8 of the Basin's largest discoveries

Trusted Operator & Chosen Partner of Top Industry Players

- Focused on advancing key projects with active joint ventures on majority of assets

District-Scale Projects in the Most Prolific Areas

- Strategically positioned along a well established mine corridor in the Athabasca Basin on trend with major uranium discoveries

Financial Support & Validation from Joint Venture Partners

- Lead operator for most JV projects with senior partners guiding decisions around exploration spend
- Positioned to deliver one of the largest field exploration programs in 2025, driven by collaborative investment while minimizing dilution

Monthly Uranium Exploration Newsletter

US increases import tariffs as domestic uranium production grows

Source: *World Nuclear News*
September 25, 2024

US uranium production continues to grow, with 2024's year-to-date production already more than triple that recorded for the whole of 2023, according to the latest figures from the US Energy Information Administration (EIA). Meanwhile, as press reports suggest US concern that its ban on Russian uranium might be being circumvented, the Office of the United States Trade Representative has announced "increased tariffs on Chinese imports including uranium."

US uranium production in the second quarter of 2024 was 97,709 pounds U3O8 (37.58 tU), the EIA said in its quarterly update. This is an 18% increase from first quarter production of 82,533 pounds U3O8, bringing production for the first half of the year to 180,242 pounds, far more than 2023's total production of 49,619 pounds, and close to 2022's full-year production of 123,143 pounds U3O8. Production in the second quarter was from five facilities: "Nobels Ranch, Ross, Lost Creek and Outer-South Highlands all in Wyoming, and Beata in Texas."

The EIA's quarterly report, issued in the same week the Office of the United States Trade Representative (USTR) announced in the Federal Register modified tariffs for various goods imported into the USA from China. These tariffs were originally imposed under section 301 of the Trade Act of 1974 to address Chinese imports related to technology transfer, intellectual property and innovation that the USA considers to be "unreasonable or discriminatory" and which burden or restrict US commerce. "The newly announced rates follow a statutory review process."

The tariff on "Actinium, cerium, curium, europium, gadolinium, promethium, radium, uranium & their compounds, alloys, specimens, ceramic products & mixtures," which currently stands at 7.5%, will increase to 25%. The new tariff will apply to "products that are 'intended for consumption or withdrawal from warehouse for consumption' on or after September 27, 2024."

According to the EIA's Uranium Marketing Annual Report, US utilities purchased 49,239 million pounds U3O8 in 2023, meaning that imports made up more of the \$1.625 million pounds purchased in the year. Sources for all but around 950,000 pounds of those imports were disclosed by the agency, with the actual amount of uranium purchased from several countries, including China, to avoid disclosure of individual company data.

Although US imports of Chinese uranium have been small, there now appears to be concern in the USA that Chinese imports may be used to circumvent the ban on the import of Russian-produced, irradiated LEU into the USA which has been in place since the Prohibiting Russian Uranium Imports Act came into force in August.

The US Department of Energy, along with other relevant agencies, is closely tracking imports from China to ensure the proper implementation of the recently enacted Prohibiting Russian Uranium Imports Act. A department spokesperson told Reuters, "US officials are monitoring imports from China and other countries to ensure they are not importing Russian uranium in part of a scheme to export nuclear produced domestically that they would otherwise have used in their own reactors," the spokesman added.

The Chinese foreign ministry told Reuters that "China has always opposed any illegal unilateral sanctions and 'long arm jurisdiction' and that cooperation between China and Russia is an independent choice made by two sovereign countries based on their respective development needs, openly and honestly, without targeting any third party, and without being interfered or controlled by any third party."

"China is willing to continue 'normal economic and trade cooperation' with countries around the world," including Russia, it added.

APPENDIX

Decades of Experience in the Athabasca Basin

Chris Frostad, BBA, CA, CPA – President & CEO and Director

- 35+ years of experience in the development and building a variety of high growth, early stage, public and private companies in both the technology and mining and metals industries.
- Served as President & CEO of Minera Alamos Inc (MAI) and director of Victory Capital Corp (VIC) and Enthusiast Gaming Holdings Inc (EGLX) as well as CEO in Resident of Toronto-based Venture Capital Firm.

Scott Frostad, BSc, MASc, PGeo – Vice President, Exploration and Director

- 30+ years of experience in the mining industry throughout Canada.
- Worked with renowned mining companies such as Lac Minerals, Teck and Placer Dome. Most recently, he was Environmental Specialist for Cogema Resources Inc. and managed environmental issues at both the Cluff Lake and McClean Lake Uranium Mines in Northern Saskatchewan.

Jhorose Cardenas, CPA – Director of Finance

- A Chartered Professional Accountant with extensive experience in public accounting, specializing in audits for SMEs, public sector agencies, Indigenous organizations and not-for-profit.
- Led financial reporting and compliance under ASPE, PSAS, and IFRS, including implementation of new standards such as CAS 315 and IFRS 17.

Jeanny So – Corporate Communications

- 20+ years of sales and investor management leadership in Capital Markets.
- A communications and relationship expert with a well-respected reputation within the mining industry.

Colin Fehr, B.Sc., P.Geo. – Chief Geologist

- 10+ years of exploration and mine site experience in a variety of commodities.
- Experienced Project Manager supervising diamond drill operators, contractors and technical staff.

Aaron Lyrette, B.Sc., G.I.T. – Project Geologist

- A skilled geologist that prioritizes safety and responsible environmental practices.
- Professional experience includes project management, core logging, geological interpretations, geographic information systems (GIS) and geological mapping.

Jessica Goodnoh, BSch – Project Geologist

- A bilingual exploration geologist, Jessica excels in core logging, geological mapping, borehole surveying and ArcGIS.
- She has mineral exploration experience within Canada and US for commodities including gold and uranium.

Linda Tong – GIS Specialist

- 20+ years of experience in GIS application, GIS development and computer programming.
- Linda has been Purepoint's GIS Specialist since January 2016.

Decades of Experience in the Athabasca Basin

Chris Frostad, BBA, CA, CPA - President & CEO and Director

- 35+ years of experience in the development and building a variety of high growth, early stage, public and private companies in both the technology and mining and metals industries.
- Served as President & CEO of Minera Alamos Inc (MAI) and director of Victory Capital Corp (VIC) and Enthusiast Gaming Holdings Inc (EGLX) as well as CEO in Resident of Toronto-based Venture Capital Firm.

Scott Frostad, BSc, MASc, PGeo – Vice President, Exploration and Director

- 30+ years of experience in the mining industry throughout Canada.
- Worked with renowned mining companies such as Lac Minerals, Teck and Placer Dome. Most recently, he was Environmental Specialist for Cogema Resources Inc. and managed environmental issues at both the Cluff Lake and McClean Lake Uranium Mines in Northern Saskatchewan.

Allan Beach, BA, LLB – Director and Corporate Secretary

- Former partner Fasken Martineau DuMoulin LLP, with over 30 years of experience emphasizing mergers and acquisitions, venture capital, tax advantaged structures and general corporate finance.

Borys Chabursky, BCS – Director

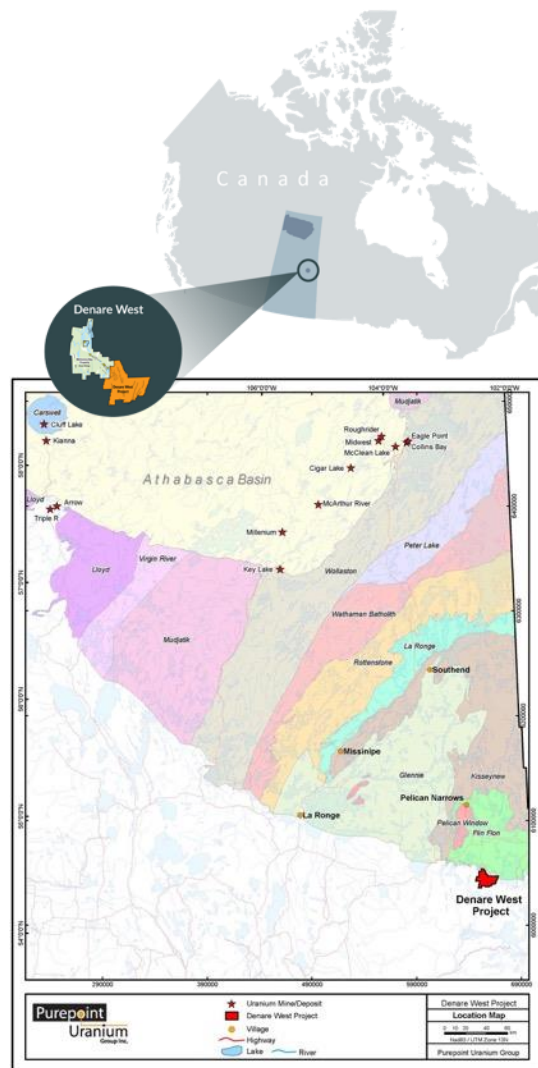

- Founder of Shift Networks and served as the Chairman of SHI Capital, a boutique investment bank, and President of SHI Ventures, a vehicle through which he has invested as an angel in over 40 companies.

Ram Ramachandran, BA, CA, CPA – CFO

- Spent 11-years as Deputy Director and Associate Chief Accountant with the Ontario Securities Commission.

Optioned to Foran Mining

Proposed Work:

- Results from the airborne EM survey are now being modelled and interpreted with historical datasets to prioritize drill targets
- Foran continues to advance the project under a \$19 million option agreement

Proposed Work:

- Summer 2025 exploration plans include prospecting, boulder sampling and soil geochemistry with results guiding follow-up ground geophysics and diamond drilling

Proposed Work:

- Fall 2025 exploration plans include a high-resolution airborne magnetic survey, soil geochemistry or ground geophysics with results guiding follow-up diamond drilling
