MONTHLY URANIUM EXPLORATION UPDATE

NOVEMBER 2025

Cameco soars on $80 billion US nuclear pact

Source: Mining.com
October 28, 2025

Cameco (TSX: CCO) (NYSE: CCJ) surged on Tuesday after the US government announced a strategic partnership with Westinghouse Electric Company, which it co-owns with Brookfield Asset Management, to accelerate the development of America's nuclear power.

Washington envisions that at least $80 billion of new nuclear reactors will be constructed across the country, using Westinghouse nuclear reactor technology. Once constructed, the reactors are expected to generate reliable and secure power, including for significant data center and compute capacity that will drive America's growth in artificial intelligence. The move, the companies say, aligns with US President Donald Trump's executive order signed in May aimed at advancing the nation's nuclear technology development, which he sees as vital to its energy security and AI ambitions.

Cameco's US-listed shares jumped more than 20% to an all-time high of $104.75 apiece on the news, taking the Canadian uranium producer's market capitalization to $45.3 billion. Brookfield Asset Management also inched higher, rising 2.2% with a market capitalization of $91.2 billion.

Nuclear renaissance
BloombergNEF estimates that power consumption from US data centers is expected to double by 2035, reaching almost 9% of total demand. The anticipated demand has created a nationwide rush to build new infrastructure, with nuclear reactors being at the forefront of this energy revolution.

Secretary of Commerce Howard Lutnick said the $80 billion pact with Westinghouse "embodies the bold vision of President Trump – to rebuild our energy sovereignty, create high-paying jobs and drive America to the forefront of the nuclear renaissance." "Our administration is focused on ensuring the rapid development, deployment and use of advanced nuclear technologies," he stressed.

The agreement comes against the backdrop of a sluggish nuclear buildout in the US — only three reactors have been completed this century.

AP1000 reactors
Under the partnership, Westinghouse will deploy its AP1000 reactor, which it hails as the most advanced commercially available, with fully passive safety systems, modular construction design and the smallest footprint per MWe on the market.

Each two-unit AP1000 site would create or sustain 45,000 manufacturing and engineering jobs in 43 states, and a national deployment will create more than 100,000 construction jobs, the companies said.

Currently, there are six AP1000 reactors setting operational performance and availability records worldwide with 14 additional reactors under construction and five more under contract, they added. To date, the AP1000 technology has been selected for nuclear energy programs in Poland, Ukraine and Bulgaria.

BMO Capital Markets, in a note, said the $80 billion investment could support 6-10 new AP1000s (depending on costs), "which could add significantly to Westinghouse's project pipeline through the 2030s."

"This partnership with the US government will help unlock the potential that Westinghouse and nuclear energy can play to accelerate the growth of artificial intelligence in the United States, while meeting growing electricity demand and energy security needs at scale," Connor Teskey, president of Brookfield Asset Management, stated in a press release.

"We expect this new partnership to support the global growth opportunities for both Westinghouse's and Cameco's nuclear products, services and technologies, adding significant long-term value for our stakeholders and enhancing energy, national and climate security around the world," added Cameco CEO Tim Gitzel.

Cameco and Brookfield formed a strategic partnership to acquire Westinghouse in October 2022. The partnership brought together Cameco's expertise in the nuclear industry with Brookfield's recognized position as one of the world's largest investors in energy generation technologies. •

Monthly Uranium Exploration Update

Presented by Purepoint Uranium Group Inc. (TSXV: PTU | OTCQB: PTUUF), the Monthly Uranium Exploration Update is a monthly newsletter that gathers information on what's happening with uranium exploration companies, including its monthly exploration news, stock performances as well as the spot and long-term uranium prices.

Purepoint Uranium Group Inc.
TSXV: PTU | OTCQB: PTUUF

Purepoint Uranium Group Inc. is a focused explorer with a dynamic portfolio of advanced projects within the renowned Athabasca Basin in Canada. The most prospective projects are actively operated on behalf of partnerships with industry leaders including Cameco Corporation, Orano Canada Inc. and IsoEnergy Ltd. Additionally, the Company holds a promising VHMS project currently optioned to and strategically positioned adjacent to and on trend with Foran Corporation's McIlvena Bay project.

Azincourt Energy completes initial work program at the Harrier Uranium Project

TSXV: AAZ

October 1, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$11.5MM	$0.025	$0.045	$0.01
Location: Central Mining Belt of Labrador, Canada			

Azincourt announced that the introductory work program has been completed on the Harrier Project.

The introductory work program was completed in late August and consisted of helicopter supported reconnaissance of existing identified uranium occurrences and prospecting of previously identified radiometric anomalies.

The 2025 program confirmed known showings, advanced Snegamook, and identified 2 new uranium showings (assays pending).

Cosa Resources expands Orbit Project

TSXV: COSA

October 1, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$33.1MM	$0.385	$0.39	$0.17
Location: Athabasca Basin, SK, Canada			

Cosa announced it has expanded its 100% owned Orbit Project to cover coincident radon, helium, and hydrogen anomalies, and electromagnetic (EM) conductors. Orbit now covers over 15,000 hectares with no encumbrances and no sandstone cover.

Follow up work is expected to include ground-based gas surveys for radon, helium, and hydrogen. As the ORS-1 and ORS-2 anomalies lie outside the 2024 airborne EM and gravity gradient survey areas, additional airborne surveying may also be completed.

Homeland Uranium closes Skull Cree Project Acquisition

TSXV: HLU

October 3, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$50.7MM	$0.49	$0.55	$0.185
Location: Moffat & Rio Blanco Counties, Colorado, USA			

Homeland Uranium announced that it has completed its previously announced transaction with Hightest Resources to acquire the Skull Creek Uranium Project. The Skull Creek Property is comprised of 154 mining claims all located on federal Bureau of Land Management-administered lands and one single state exploration permit administered by the State of Colorado (the “SEP Lands”).

As part of the transaction, Homeland paid Hightest US$300,000 cash and issued 750,000 common shares of Homeland to acquire a 100% interest in the Property. Hightest retains a 2% NSR royalty on all mineral production from the Property, with the exception of production from the SEP Lands where the royalty is reduced to 1.5%. The royalty can be reduced to 1% should Homeland issue an additional payment of US$1.5 million at any time before delivering to Hightest a notice of the intention to commence commercial production from a mineral deposit located wholly or partially within the Property.

Hightest will also receive potential contingency payments based upon the size of any uranium resource defined on the Property consistent with NI 43-101 standards in the future.

F3 Uranium begins 3,000 meter fall drill program at Tetra Zone

TSXV: FUU

October 8, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$109.3MM	$0.17	$0.29	$0.15
Location: Athabasca Basin, SK, Canada			

F3 announced a fall drill program at its 100% owned Broach Lake Property, on the recently discovered high-grade Tetra Zone.

This 3,000m diamond drilling fall program is designed to test the extent of the uranium mineralization which is currently highlighted by PLN25-205, which returned a 1.0m high grade interval with 2.50% U3O8 within a 22.5m mineralized main interval averaging 0.26% U3O8 and PLN25-217, which intersected a total of 67.0m composite anomalous radioactivity including 49.0m of continuous radioactivity. Ground EM surveying has also been completed, and 3D inversions are in progress; these results will be incorporated into the targeting model for regional drill targeting along strike.

IsoEnergy to acquire Toro Energy

TSX: ISO

October 12, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$777.0MM	$14.34	$15.82	$6.79
Location: Wiluna, Western Australia			

IsoEnergy announced that they agreed to acquire all of the issued and outstanding ordinary shares of Toro by way of a scheme of arrangement under Australia's Corporations Act 2001, subject to the satisfaction of various conditions. Toro owns 100% of the Wiluna Uranium Project, located 30km south of the town of Wiluna in the northern goldfields of Western Australia.

Under the terms of the Transaction, Toro shareholders will receive 0.036 of a common share of IsoEnergy for each Toro Share held on the Scheme record date. Existing shareholders of IsoEnergy and Toro will own approximately 92.9% and 7.1% on a fully-diluted in-the-money basis, respectively, of the outstanding ISO Shares upon implementation of the Transaction.

The implied fully-diluted in-the-money equity value of the Transaction is equal to approximately A$75.0million (C$68.1million).

Skyharbour partner North Shore completes prospecting program at the Falcon Project

TSXV: SYH

October 14, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$77.7MM	$0.37	$0.50	$0.28
Location: Athabasca Basin, SK, Canada			

Skyharbour announced hat its partner company, North Shore Uranium, has completed a prospecting program at its Falcon Property located at the eastern margin of the Athabasca Basin in Saskatchewan.

Significant radioactivity was confirmed in outcrop at targets FA020, up to 20,000 cps (the historic EWA Showing) and FA025, up to 27,000 cps (the historic D Zone Showing area) . In addition, several boulders with elevated radioactivity were discovered, including at targets FA019, close to 7,000 cps and FA033, up to 6,000 cps. Seventy-four rock samples were collected during the program, and they have been submitted to the Saskatchewan Research Council (SRC) Geoanalytical Laboratory for uranium, associated metals and elements and Rare Earth Element analysis. Assay results are pending.

North Shore may acquire an initial 80% interest in Falcon by issuing common shares having an aggregate value of CAD $1,225,000, making aggregate cash payments of $525,000 to Skyharbour, and incurring an aggregate of $3,550,000 in exploration expenditures on the property over the earn-in period.

Cosa Resources identified priority drill targets at the Darby Uranium Project

TSXV: COSA

October 14, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$33.1MM	$0.385	$0.39	$0.17
Location: Athabasca Basin, SK, Canada			

Cosa announced it has identified multiple high priority follow up drill targets at the Darby Project. Darby is a joint venture between Cosa and Denison Mines Corp.

Highlights

- Identification of highly prospective drill ready targets through extensive historical drill core and data review at the Delta and Charlie trends
- Multiple historical drill holes intersected features suggesting proximity to uranium mineralization – warranting direct follow-up
- Evaluation of remaining trends is ongoing and expected to produce additional priority targets at Darby

Stallion Uranium commencing ground electromagnetic survey on the Coyotte Corridor

TSXV: STUD

October 16, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$53.9MM	$0.43	$0.53	$0.02
Location: Nunavut, Canada			

Stallion announced that it will commence a high-resolution ground Time Domain Electromagnetic (TDEM) survey on November 1, 2025, on its Coyote Target, part of the Moonlite Project in the Athabasca Basin, Saskatchewan, Canada in partnership with Atha Energy Corp.

This survey is designed to extend and refine the results of Stallion's previous EM work, with the goal of precisely defining conductive structures commonly associated with uranium mineralization. Survey results are expected in late November 2025 and will directly guide final drill targeting. Stallion is preparing to mobilize for a winter drill program in December 2025, where the refined targets from the Coyote Corridor will be tested for potential uranium mineralization.

Blue Sky completes geophysical survey at Amarillo Grande

TSXV: BSK

October 16, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$23.7MM	$0.055	$0.11	$0.04
Location: Rio Negro Province, Argentina			

Blue Sky announced it completed an induced polarization (pole-dipole electrical tomography geophysical survey at the Ivana Gap target, located between the Company's Ivana Deposit and Ivana Central target.

The objective of the ET survey was to refine targets for drilling by tracing the subsurface extent of the organic-rich sandstone/REDOX front between the Ivana Deposit and the Ivana Central target. The results of this geophysical survey will help guide part of an upcoming diamond drill program that is now being planned and is scheduled to commence in the fourth quarter of 2025.

Standard Uranium confirms strong radioactivity at surface at Rocas Uranium Project

TSXV: STND

October 16, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$10.6MM	$0.12	$0.21	$0.045
Location: Athabasca Basin, SK, Canada			

Standard announced preliminary results from its 2025 exploration program at the Rocas Uranium Project, currently under a three-year earn-in option agreement with Collective Metals Inc.

A total of 16 outcrop and boulder grab samples have been submitted to Saskatchewan Research Council Geoanalytical Laboratories in Saskatoon, SK for whole-rock, uranium, and REE geochemical analysis.

A total of 73 handheld scintillometer readings of anomalous radioactivity >300 cps were recorded, including 10 measurements >10,000 cps at surface.

Standard Uranium confirms high-grade mineralization from grab sample at Corvo

TSXV: STND

October 20, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$10.6MM	$0.12	$0.21	$0.045
Location: Athabasca Basin, SK, Canada			

Standard announced final assay results from its 2025 exploration programs the Corvo Uranium Project, currently under a three-year earn-in option agreement with Aventis Energy Inc. A total of 30 outcrop and boulder grab samples were submitted to Saskatchewan Research Council Geoanalytical Laboratories in Saskatoon, SK for whole-rock, uranium, and REE geochemical analysis.

Verification of surficial uranium mineralization across the Project, including the historical Manhattan Showing with assay results returning uranium grades ranging from 0.72% to 8.10% U3O8 in outcrop grab samples.

An extensive ground gravity survey is scheduled for December 2025, designed to identify density anomalies potentially representing hydrothermal alteration systems coincident with newly refined EM conductor trends across the Project. A diamond drill program is being planned for Q1 2026 to begin testing targets developed and ranked through the successful programs executed in 2025.

Anfield completes confirmation drill program at JD-7 Mine and prepared for resource update

TSXV: AEC

October 21, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$195.3MM	$11.92	$16.25	$3.37
Location: Montrose County, Colorado, USA			

Anfield announced the completion of a 20-hole, 8,000-foot confirmation drill program at its JD-7 mine, one of the five mines (JD5, JD-6, JD-7, JD-8 and JD-9) which make up the Company's Paradox Mine Complex. The drill results will be incorporated into a new uranium and vanadium resource report in Q1/26, alongside the additional drilling to be completed at the other JD mines.

A total of 23 drill holes were performed over the 20 planned drilling targets. Highlights include: 17.0 ft grading an average of 5,190 ppm (0.519%) eU3O8 in Hole JD7-25-004B, with a peak of 14,850 ppm (1.485%) eU3O8 at 153.5 ft; 19.0 ft grading an average of 2,380 ppm (0.238%) eU3O8 in Hole JD7-25-005, with a peak of 9,240 ppm (0.924%) eU3O8 at 170.0 ft; 17.0 ft grading an average of 1,620 ppm (0.162%) eU3O8 in Hole JD7-25-012, with a peak of 5,990 ppm (0.599%) eU3O8 at 185.0 ft; and 21.0 ft grading an average of 2,500 ppm (0.250%) eU3O8 in Hole JD7-25-014B, with a peak of 7,770 ppm (0.777%) eU3O8 at 212.5 ft.

F4 defines drill targets with ariborne MT survey on the Cree Bay Property

TSXV: FFU

October 27, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$6.6MM	$0.085	$0.15	$0.04
Location: Athabasca Basin, SK, Canada			

F4 announced results from a recently completed airborne Mobile MagnetoTellurics (Mobile MT) survey over the Cree Bay Project. The new MT data reveals a broad resistivity-low zone through the heart of the property, defining a key area for follow-up exploration along the promising structural offset inferred from 2019 drilling.

The newly defined resistivity-low zone, combined with the geophysical models from ground data collected in 2022, will be used to refine drill targets. In addition, the broader MT dataset provides valuable context for defining additional target areas for future focused ground geophysical surveys and follow-up exploration drilling.

Myriad reports additional assays from Copper Mountain Uranium Project

CSE: M

October 20, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$38.2MM	$0.45	$0.57	$0.215
Location: Wyoming, USA			

Myriad announced updated chemical assay results from October-November 2024 drilling at the Copper Mountain Uranium Project in Wyoming.

Highlights of new intervals above 500 ppm cut-off not previously reported include:

- CAN0017: 502 ppm U3O8 over 2.62 ft (0.80 m) from 783.92 ft to 786.54 ft
- CAN0019: 533 ppm U3O8 over 4.92 ft (1.50 m) from 220.74 ft to 225.66 ft
- CAN0023: 623 ppm U3O8 over 1.32 ft (0.40 m) from 304.38 ft to 305.70 ft
- CAN0023: 804 ppm U3O8 over 2.95 ft (0.90 m) from 547.43 ft to 550.38 ft
- CAN0031: 841 ppm U3O8 over 2.95 ft (0.90 m) from 201.39 ft to 204.34 ft

Urano Energy expands I-70 Uranium Project through acquisition from enCore Energy

CSE: UE

October 21, 2025

Market Cap	Price as of 10/31/25	52-Week High	52-Week Low
$19.9MM	$0.11	$0.175	$0.05
Location: San Rafael District, Utah, USA			

Urano announced the acquisition of the past producing Snow and Probe Uranium Mines from enCore Energy Corp. This acquisition increases the Company's total mineral rights by approximately 60% at the I-70 Uranium Project, adding 599 acres (2.42 km^2) contiguous with Urano's existing I-70 Uranium Project holdings.

From 1973–1982, Atlas Corp. produced approximately 935,000 lbs. U_3O_8 at 0.19% U3O8 from the Properties. Atlas reported a remaining historical resource estimate of 295,534 lbs. U_3O_8 at 0.23% U3O8 in the Probe-North Snow deposit, audited by an independent registered mining engineer consulting to Atlas Corp.

Under the terms of the agreement, Urano Energy has paid $65,980.60 CAD in cash and issued $200,000 CAD of Urano Energy common shares, calculated based on the volume-weighted average price (VWAP) of Urano common stock during the fifteen trading-day period ending on the trading day prior to October 7, 2025.
